

We have received an e-mail from Ms. Elmira Abasbekova with a recent activity report, and we will introduce it in the next page.

Her place of employment and title are as follows.

She participated in energy utilization technology course held at JICA Kyushu in September and October 2024.

Ms. Elmira Abasbekova

National Secretariat of COOMET in Kyrgyz Republic

Head of laboratory of electricity and time.

Center for standardization and metrology under the Ministry of economy and commerce of the Kyrgyz Republic

JICA Course Title : Promotion of Energy Efficiency and Conservation (B)

Course Leader : Mr. Takuya KUBOTA

Dear colleagues,

Once again, thank you so much for the wonderful knowledge and skills shared during the training course. I have gained valuable experience throughout the training. I have attached my report as follows ; please review it.
Wishing you all the best and much success!

<Action Report>

On March 5, 2025, a seminar organized by Elmira Abasbekova was held at the Center for Standardization and Metrology under the Ministry of Economy and Commerce of the Kyrgyz Republic on the topic:
"Enhancing Energy Literacy Among the Population and Organizations to Improve Energy Efficiency, Develop Energy Saving, and Address Environmental Issues in the Kyrgyz Republic Based on Japan's Experience."

During the event, seminar participants were introduced to Japan's advanced practices in energy conservation and environmental sustainability and explored effective mechanisms and strategies for improving energy efficiency at both the organizational and household levels. Special emphasis was placed on practical recommendations for implementing energy-efficient technologies and policies.

A key focus of the seminar was raising public awareness about the importance of energy conservation when using household appliances, as well as examining the ISO 50001:2018 international standard. Experts discussed its significance in improving energy efficiency in organizations, reducing energy costs, enhancing environmental sustainability, and increasing business competitiveness.

The seminar served as a valuable platform for knowledge exchange and experience sharing. Experts presented practical solutions for implementing sustainable energy initiatives in the Kyrgyz Republic, contributing to more efficient energy use and an improved environmental situation in the country.

The event was attended by representatives of relevant ministries and agencies, as well as representatives of small and medium-sized businesses interested in developing energy-efficient solutions.

A systematic approach and active cooperation between the government, businesses, and the public in the field of energy efficiency and conservation are key factors in reducing carbon emissions in Kyrgyzstan.

Developing a new mindset and habits in daily life to reduce energy consumption can lead to a significant increase in energy efficiency, lower costs, and, ultimately, the resolution of environmental challenges and the sustainable development of society.

After a seminar with participants, a working group was established to promote public awareness in the field of energy efficiency and energy conservation.

To support this initiative, I will develop a technical assignment in the form of a proposal with 3-4 key components for a follow-up project under JICA, as well as for GIZ/KOICA. Once completed, I will share it with the group for review.

I will share the future outcome results after the approval of the project mentioned above.
